LEADING FOR ENGAGEMENT
PRINCIPLES OF TRANSFORMATIONAL LEADERSHIP

Many of the world’s top-performing organizations understand that employee engagement is a force that drives performance outcomes. Research by Gallup and others shows that engaged employees are more productive, more profitable, more customer-focused, and less likely to leave their employer. Unfortunately, Gallup Poll surveys over the last decade find that employee engagement has been on the decline.

Program participants will develop a new vocabulary on engagement and a new vocabulary on leadership. They’re going to know whether or not their employees are engaged and why, as well as whether or not they are effective as leaders driving engagement.

The day includes a number of questionnaires to gauge your leadership style. Additionally, employee assessment tools will be provided so that managers can better determine their employees’ view of their work and their level of engagement.

Key topics of discussion include:
- Enhancing your ability to diagnose engagement problems
- Building your understanding of your own leadership style and preferences
- Becoming more transformational in your leadership style
- Transforming the disengaged workforce to drive business performance

The program will include a mixture of best practices in adult education including traditional lecture, experiential discussion, video clips, exercises, and assessments. Case examples from companies known for either engagement or transformational leadership such as Apple, Google, Zappos, SAS, and The Container Store will also be used.
